Course Information
Credit Hours: 3.0
Semester/Year: Fall 2005
Class Location: Studio West 101
Text(s) Required:

Professor Information
Instructor: Joy L. Hendrick, Ph.D.
Phone: (607) 753-5707
Office Location: Studio West 152
Office Hours: MW 8:30-10:00; MW 11:30-12:00, Th 12-12:30
Email: Hendrick@cortland.edu
Web: http://web.cortland.edu/hendrick

COURSE DESCRIPTION:
This is an advanced course in motor behavior. Content includes coverage of human information processing, sensory and central contribution of motor control, skill acquisition considerations and current issues in motor behavior with research implications. Prior knowledge of motor behavior is expected.

COURSE ATTENDANCE POLICY:
Class attendance is required, however, students will not be penalized for having one unexcused absence. Afterwards, there will be up to a letter-grade deduction on the final grade for each additional absence. Illness, travel, appointments, and coaching obligations are some examples of unexcused absences. Hospitalization, death in the immediate family, away SUNY Cortland athletic contests are examples of excused absences. No handouts, notes or assistance will be given for material distributed or covered during an unexcused absence (or an excused absence without prior, written notification). Students are 100 percent responsible for all work missed, regardless of the type of absence. In the event of extreme winter weather later in the semester, students should refer to the college home page in the mid afternoon to see if cancellation notices are posted. Otherwise, students should assume the classes will be held.

EVALUATION OF STUDENT PERFORMANCE:
Requirements and Evaluation:
I. Examinations (2-3) 50%
II. Assignments 50%
Total 100%

ASSIGNMENTS: No assignments/handouts will be given out after the class session in which they were distributed, unless previous arrangements had been made. All written work will be collected at the beginning of class on the day it is due. No late work will be graded for credit. All work due on the day of an excused absence is still expected to be turned in on time, unless previous arrangements have been made. Each student is expected to submit his/her own work, including calculations and computer assignments (refer to the section in the College Handbook on Academic Dishonesty). Minimum requirements for passing the course include: satisfactory completion of at least 80% of all written work, and passing grades on at least half of the exams. Assignments will include:
Refereed Journal Article Abstracts (15 - 20%) – Four refereed journal articles will be assigned throughout the semester to be read and then summarized in abstract form. These must be typed (2 pages max, double-spaced). Each abstract will be worth 10 points and assessed by three 3-point rubrics (knowledge, quality product and critical analysis) and 1 point for following the APA format.

Mini-Papers (10-15%) – Two small papers will be assigned throughout the semester which relate to researching a current topic in the field. Specific information will be given at a later date.

Research Project (20%) – As a culminating experience towards the end of the semester, students will design and carry out a research project. Specific information will be given at a later date.

EXPECTATIONS: For student success, expectations include: coming prepared and on-time to all classes, staying up-to-date and studying all assignments (this equates to at least 5-6 hours of out-of-class time between each class session, with additional time for studying before each exam and/or working on projects), turning in all assignments on-time, and seeking help and asking questions as soon as problems arise.

TECHNOLOGY: Students are encouraged to use computers (either in one of the campus computer labs or one’s personal computer) to enhance the quality of their written assignments. Students are also encouraged to obtain on-campus email accounts and to frequently check their email. Announcements and reminders may be distributed via email to the class at various times throughout the semester. Occasionally in class, references to web sites will be made. Therefore, students should be familiar with how to use the Internet and accessing reference material via the library databases.

ACADEMIC INTEGRITY: The College is an academic community, which values academic integrity and takes seriously its responsibility for upholding academic honesty. All members of the academic community have an obligation to uphold high intellectual and ethical standards. For more information on academic integrity and how academic dishonesty can occur, please refer to the College Handbook, the College Catalog, the Code of Student Conduct and Related Policies and at the following web site http://w3.cortland.edu/conduct/sa.htm All work submitted for this class must be each student's own work. Any work submitted (in part or whole) that is not unique will be considered plagiarized and will be treated as such per academic policy. This includes, but is not limited to, material retrieved from references; therefore proper documentation of cited material (using quotation marks with associated page numbers) is a must!

STUDENTS WITH DISABILITIES: SUNY Cortland is committed to upholding and maintaining all aspects of the federal Americans with Disabilities Act of 1990 (ADA) and Section 504 of the Rehabilitation Act of 1973. If you are a student with a disability and wish to request accommodations, please contact the Office of Disability Services located in B-40 Van Hoesen Hall or call (607)753-2066 for an appointment. Any information regarding your disability will remain confidential. Because many accommodations require early planning, requests for accommodations should be made as early as possible.
OBJECTIVES OF THE COURSE:

The student will be able to:

1. describe the historical development of motor behavior as a scientific discipline.
2. demonstrate an understanding of the role that the nervous system and sensory systems play in human motor performance.
3. demonstrate an understanding of how information is processed and integrated in motor performance.
4. describe, apply and demonstrate the ability to use various motor behavior instruments and apparatus in the experimental study of motor behavior.
5. demonstrate an understanding of how various factors which influence skill acquisition, human movement and motor performance including practice considerations, augmented practice, theories of motor learning, attention and arousal, transfer considerations and individual differences.
6. conceptualize many current research practices, procedures and issues in the field of motor performance

COURSE OUTLINE:

I. Introduction to Motor Behavior
   A. Review of basic terminology
   B. Historical development
   C. Methodology
   D. Traditional and classical studies

II. Information Processing
   A. Information processing models
   B. Reaction Time
   C. Theories of attention
   D. Arousal and other influential factors

III. Motor Control
   A. Sensory contributions
   B. Central contributions
   C. Principles of speed and accuracy
   D. Coordination

IV. Motor Learning
   A. Practice considerations
   B. Augmented Feedback
   C. The Learning Process
   D. Retention and Transfer

V. Current Issues and Potential Research Directions
## Tentative Course Outline
